SPIN CONTROL TECHNOLOGY®

A **PATENTED** surface texture in our iconic Pro Stock® Select and Pro Stock® Leather designed to increase friction between the ball and your glove.

Spin Control Technology® is designed to help you corral the ball and cleanly transfer it to your throwing hand so you can deliver it to your target with speed and precision.

In addition to our on-field work with ball players, we've collaborated with our Pro Stock® Leather Tannery and Aerodynamics experts to create A2K® and A2000® gloves that help players control the ball while making plays faster and more consistently than ever before.

Dimpled texture added to the palm, fingers and occasionally the web.

SUPERSKIN™

SuperSkin™ is a carefully tested and refined microfiber material, perfected to deliver ultimate durability at the lightest weight possible. It repels moisture to keep your glove from getting bogged down by the weight of rain or wet grass. For years, other manufacturers have tried to create their own version of SuperSkin™ using ballistic nylon, molded materials and more—only to come up short time after time.

WORN BY MORE THAN 50% OF PRO PLAYERS

Since the 1990s, countless pros have sworn by their SuperSkin™ gloves. Craig Counsell, who played 16 seasons in the big leagues, is just one example. Aso built him one of the first SuperSkin™ gloves in 1999, and he used it until his retirement in 2011. "Craig Counsell loved the glove so much," Aso said.

WILSON BALL GLOVE MASTER CRAFTSMAN

SHIGEAKI ASO

If you love what you do, you'll never work a day in your life. Few individuals in the world embody that expression as much as Aso, who has dedicated his life to the game he loves.

THAT'S MY GOAL. I DON'T WANT A PLAYER TO THINK ABOUT THEIR GLOVE AT ALL. HIS SMILE IS MY SMILE. IF HE SMILES, I CAN SMILE.

- Shigeaki Aso

Wilson Baseball Master Craftsman Shigeaki Aso has revolutionized the game for generations of players. His initial impact on the highest level of the game came in 1986 when he visited pro camps for the first time. With his decades of industry experience working with hides and leather quality control, he immediately noticed how common infield patterns featured long pinky and thumb stalls that were cumbersome to players.

He gathered feedback from as many players as he could find. One year later, he returned with what is, to this day, the most popular Wilson pattern — the A2000® 1786. From there, Aso developed the A2000® 1787 and A2000® 1788, launching a legendary journey of creating ball gloves.

Aso's initial iconic glove patterns were just the first innovations to come from his relationships with players. Aso has put in countless hours with some of the best to ever set foot on the field. Those collaborative efforts continue to this day with elite talents like Mookie Betts, Tim Anderson and Clayton Kershaw.

Aso credits the still-present language barrier between himself and big leaguers for his detailed understanding of what players are looking for in their gloves.

"I'm not a very good English speaker, which is why I ask questions again and again to players," Aso said. "They explain very honestly what they want. If I spoke English better, would they explain things so well to me? But they make sure to explain everything well because that means they'll get a great glove."

These conversations lead to the constant evolution of Wilson ball gloves, from the groundbreaking development of SuperSkin™ to more recent designs like Flat Finger Binding and Fastpitch-specific patterns and features. All these innovations share one common goal — ensuring that a player never has to think about their glove. It serves as an extension of the athlete, not an accessory.

Every glove has unique features, from the laces to the webbing and even the materials used, culminating in an innovative line of Wilson Game Model gloves.

A2K®

THE LEGENDARY A2K

Meticulously engineered, the A2K® is unrivaled among ball gloves. No detail is too small to Wilson Master Craftsman Shigeaki Aso and the experts who designed the A2K® for elite players, using the most premium materials and innovative technologies available in modern ball gloves. Flawless Pro Stock® Select leather is sorted three times to remove blemishes or imperfections, and each A2K® features Double Palm Construction—a strategically placed layer of leather in the palm to stabilize and maintain the pocket. Rolled Dual Welting reinforces the glove's shape, and innovations like lightweight SuperSkin™ and patented Spin Control Technology™ offer extra advantages on the field.

1.

PRO STOCK® SELECT LEATHER:
Wilson craftsmen triple-sort Pro Stock® Select Leather hides for consistency and flawlessness, using only the top five percent of materials in A2K ball gloves. The result is an incomparable break-in and long-lasting shape.

2.

ROLLED DUAL WELTING™:
Strips of Pro Stock® Select Leather are skived thin and rolled to provide the glove's long-lasting shape.

3.

DOUBLE PALM CONSTRUCTION:
A thin, perfectly shaped piece of leather placed between the palm and interior liner generates maximum pocket stability.

4.

THREE TIMES MORE SHAPING:
Expert glove craftsmen spend three times longer pounding and shaping the A2K® by hand, helping reduce break-in time.

SLOWPITCH BATS

THE DIFFERENCE IS IN THE DETAILS

KNOB MEDALLION

Easy-to-read medallions have been embedded in the knob and indicate the MLB® Prime® grade of wood, species and length, while the bat name is engraved in the surrounding area.

EXOPRO FINISH

The MLB® Prime® lineup features the revolutionary EXOPRO finish that's twice as hard as the previous EXOARMOR®. This innovation in wood bat technology gives you a finish you can feel in an incredibly durable top coat that not only drastically increases surface hardness, but gives you a mirror-like finish in high-gloss models.

SEAMLESS DECALS

Louisville Slugger's exclusive Seamless Decals are applied directly under the top coat, giving MLB® Prime® bats a pristine look. All MLB Prime models feature branding that blends into the bat almost as intricately as the grain of the wood.

CRAFTSMAN-STYLE CUP

Our completely re-engineered Craftsman-Style Cup features a thicker width edge along the end of the barrel, lending added strength and durability to the end of the bat to help reduce chipping and cracking.

30-DAY LIMITED WARRANTY

All MLB® Prime® bats come with a 30-day limited warranty. Restrictions apply. Visit Slugger.com for complete details.

WOOD SPECIES

Louisville Slugger is dedicated to crafting wood bats perfect for each player. We offer several wood species, headlined by Maple and Birch. So no matter how you like your lumber, the team at Louisville Slugger has you covered.

MAPLE

The dominant wood species in Major League Baseball, Maple bats are known for their surface hardness, stiffer feel and unmatched sound.

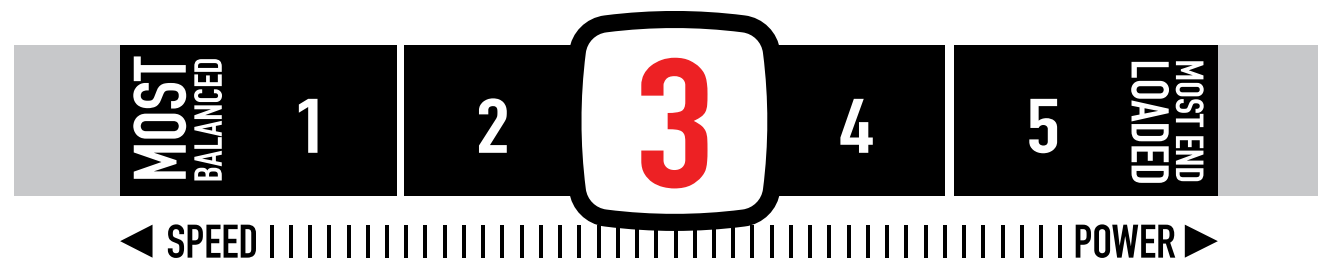

BIRCH

One of the newer, but fastest growing wood species in Major League Baseball, Birch bats feature a surface hardness close to that of maple but increased flexibility.

SWING WEIGHT SCALE

Everyone talks about the length and weight of their baseball bat. But swing weight might be one of the most impactful ways to classify bats. Swing weight is a determination of how a bat's weight is distributed along its length. More weight toward the end of the barrel means you're swinging an end-loaded bat. These models create more momentum in a player's swing and generate more power and distance. Evenly distributed weight in balanced bats allow for a potentially greater swing speed for many hitters – perfect for players who focus on bat control and increased contact.

M1.J™

CLASS: OFFENSIVE PITCHING MACHINE
LEVEL: TRAVEL

The all new M1.J is the fastball only version of the only version of previous ATEC single-wheel machines. This machine is great for younger age groups and machine pitch leagues, with its lightweight portability and easy setup. With speeds of 30-70 MPH, this will allow the machine user to throw a straight fastball to match any player's abilities. It's built using the same technology, processes and materials as ATEC's other industry leading training machines. Similar to other high-end ATEC® machines, the M1.J is also equipped with a dual-durometer concave wheel. This wheel is engineered to increase the wheel's grip on the ball which maximize both pitch speed and accuracy. The M1.J also features a tilting throwing head, which allows the machine to throw ground balls and fly balls. The R2, formerly called the Rookie, is built for collegiate level defensive training. It is designed to be a more compact professional grade training machine. The R2 has the unique ability to rotate and pivot freely while the machine is on and in use, allowing you to challenge multiple fielders, playing different positions, one after another. This machine also allows you to achieve the maximum number of repetitions for any defensive drill; giving your players more quality repetitions than could possibly be achieved with only a fungo bat.
